

IEEE Communications Society (ComSoc) Ad Hoc & Sensor Networks Technical Committee (AHSN TC)

AHSN TC Meeting at IEEE ICC 2016, Kuala Lumpur, Malaysia

Chair: Jalel Ben Othman

Vice Chair: Cheng Li

Secretary: Soumaya Cherkaoui

Tuesday May 24th 2016, 7:30 am - 9:00am

Mandarin Hotel, Topaz Room

Meeting Agenda

- Welcome and introduction
- Approval of the agenda
- Approval of the minutes of the GC'16 AHSN TC meeting
- Business arising from the minutes
- AHSN TC 2016 outstanding service recognition award
- AHSN TC newsletters
- Standard Liaison Report
- Update on AHSN TC activities on conferences/symposia
- Other business
- Next AHSN TC meeting
- Meeting adjourn

The AHSN Technical Committee (TC) Outstanding Service and Leadership Recognition Award

The AHSN TC Outstanding Service and Leadership Recognition Award aims to recognize members of the AHSN TC who have demonstrated significant contributions to promote the AHSN TC activities and achieved an outstanding record of service to the community.

Outstanding Service Recognition Award Selection Committee:

- **(Chair)** Jalel Ben-Othman, University of Paris , Current TC Chair
- Dr. Azzedine Boukerche, University of Ottawa, Past TC Chair
- Dr. Cheng Li, Memorial University, TC Vice Chair
- Dr. Soumaya Cherkaoui, Sherbrooke University, TC Secretary

**The IEEE Communications Society
Ad Hoc and Sensor Networks (AHSN)
Technical Committee**

Outstanding Service Recognition Award

Presented to

Dr. Nei Kato

Tohoku University, Japan

For outstanding achievements, exemplary leadership and dedicated services to the ad hoc and sensor networking research community

Abstract

Modern vehicles are like a four-wheels computer which maintenance requires more computer skills than use of hammers, screwdrivers and spanners. Vehicles are aware of not only their operational state but also their surroundings through sensors, radars and GPS capabilities. The newest trend is to allow vehicles to exchange information thus making them networking. Therefore, the need for software-intensive in-vehicle applications and services is obvious. CarCoDe European project is the ICT experts' response to develop a software platform for automotive domain, which evokes the generation of the traffic service domain ecosystem. The project, mainly, aims to build cross-platform software enablers to support development of cooperative in-vehicle services. Therefore, cooperation between various tools (automotive sensors and software systems) should be established to allow third party developers generate new innovative applications. In this brief article, we provide the main CarCoDe goals, depict its architecture and highlight potential achievements and realizations.

1. Introduction

Car-to-car (C2C) and car-to-infrastructure (C2I) communication and its support systems have progressed slowly both in standardization and in the automotive industry. Meanwhile, more and more electronic devices and systems have been brought to vehicles, especially in the professional sector, e.g. to taxis, trucks, excavators, or forest harvesters and forwarders. A common wireless band for IEEE802.11p/WAVE [1] systems was reserved recently both in Europe and in the U.S. but we still may need to wait for years before its deployment really begins. Currently, there is room for research and new innovation as none of the proposed approaches to C2C or C2I have reached wide acceptance or strong role in the market. The wireless communication of on-board vehicle systems and roadside stations may be based on alternative technologies. Currently, IEEE 802.11p has strong public support for the short range while cellular systems 4G and LTE [2] are potential long-range solutions. Of these, LTE may get a stronger role soon and it could replace all others. Anyway, for offering appropriate user experience, on-board systems in vehicles should utilize different radio systems efficiently and seamlessly.

For the potential applications of the European project CarCoDe (2013-2015) the field is also quite open: the proliferation of electronics in automobiles has produced a huge volume of sensor data within the context of internal and external vehicle communication. The in-vehicle computing capability increase in storage and processing can be exploited to offer interfaces for

Some Activities

- AHNTC is one of the most active TCs in IEEE ComSoc Standards Development (SDB) Board.
- AHSNTC liaison is also member of SPDB.
- AHNTC liaison provides comments and suggestions on various activities including the commission of new standards projects.
- Liaison participates in the discussions regarding new PARs and standards that interesting to AHSNTC.
- AHNTC has been a vocal proponent for involving TCs actively in IEEE SDB/SPDB.
- AHNTC presence in IEEE SPDB has a long lasting impact on future communication technologies.
